## What is claimed is:

1. A document browser that merges and displays additional information with document data, including text data and/or image data, that can be displayed on a display device, comprising:

an additional information receiving means for receiving input of the additional information;

- a browsing means for merging and displaying on the display device the document data with the additional information;
- a positional information obtaining means for obtaining the positional information of the additional information in the document data;
- a properties information obtaining means for obtaining properties information of the additional information;

an additional information storage means for storing the additional information with the positional information and the properties information;

an additional information searching means for searching the additional information storage means based on the properties information of the additional information; and

a search results display means for displaying on the display device the search results found by the additional information searching means.

- 2. The document browser according to claim 1, wherein the document data is an HTML document, an XML document, or other structured document.
- 25 3. The document browser according to claim 1, wherein the properties information includes: attribute information included in the additional information such as line color, level of transparency, and line thickness; or other properties data

of the additional information such as a shape classification, size, or date and time of input.

- 4. The document browser according to any of the claims 1, wherein the additional information receiving means comprises a pen tablet, a mouse, or other pointing device.
  - 5. The document browser according to any of the claims 1, wherein the additional information is displayed semi-transparently so that the document data is identifiable when the additional information is merged with the document data.
  - 6. A document browsing method in which additional information is merged and displayed with document data, including text data and/or image data, that can be displayed on a display device, comprising:
    - a step of displaying the document data on a display device;

- a step of receiving an input of additional information with respect to the document data displayed on the display device;
- a step of merging and displaying on the display device the document data with the additional information;
- a step of obtaining the positional information of the additional information in the document data;
  - a step of obtaining properties information of the additional information;
  - a step of storing the additional information with the positional information and the properties information;
  - a step of searching the additional information stored in the additional information storage means based on the properties information of the additional information; and

a step of displaying on the display device the search results found by the additional information searching means.

7. A recording medium in which a program is recorded for executing a document browsing method on a computer, the document browsing method merging and displaying additional information with document data, including text data and/or image data, that can be displayed on a display device, and comprising:

a step of displaying the document data on a display device;
